WHAT IS YOUR NEXT STEP?

# Introduction

**Hi, I'm Phil!**

- ▶ **MCAT Content writer**
  - ▶ **Tutored and taught for 9+ years**
  - ▶ **Attended University of Nebraska Medical Center as an MD/PhD student.**
- ✓ **Next Step is a team of test prep and educational experts committed to excellence.**

# Questions that have been emailed in

1. How many practice exams did you take?
2. What was the most effective way to review after you had taken an exam?
3. Looking back, is there anything you wish you did to aid your studying?
4. What is the most effective way to study for C/P?

# Questions that have been emailed in

5. How concerned should we be with details of every given topic? Are the details what sets a 99% scorer apart from a 90% scorer?

6. Do you have any tips on how to switch one's mindset into the critical thinking mode that the AAMC expects for the MCAT?

7. I feel like I'm trying to rush through the questions because I usually run out of time, so I make silly mistakes or get easier questions wrong, what strategy did you use for timing?

8. What was your strategy for CARS?

**Figure 1** Eosinophil activation as measured by percent of CD69-positive cells after 3 and 12 hours of co-culture (\*p < 0.05, \*\*p < 0.01, \*\*\*p < 0.001)

Next, researchers aimed to assess the effect of NK co-culture on eosinophil degranulation. After 3 and 12 hours of co-culture, samples were centrifuged at 1500 rpm, and ECP levels were measured in the supernatants (Figure 2). No ECP was detected in supernatant culture of NK cells alone.

**Question 18**

Which of the statements below is supported by the experimental results, as shown in Figures 1 and 2?

- A. The duration of Eos co-culture with NK cells directly and linearly correlates to the amount of ECP found in the supernatant after centrifugation.
- B. Cells cultured with a 1:1 NK-to-Eos ratio displayed statistically similar levels of activation to cells cultured with a 5:1 NK-to-Eos ratio, as measured by CD69 expression.
- C. NK co-culture stimulates Eos activation while inhibiting degranulation.
- D. Co-culture with NK cells significantly increased Eos degranulation in all groups, as compared to Eos cells cultured alone.
